

University ranks

BACKÉ Julian, SALZER Tobias, SINGH Ajayvir
Group 19

- How do university rankings change over time?
- Which characteristics of universities contribute most to good rankings, or to large changes in the ranking position?
- How do these characteristics correlate with characteristics of cities or countries in which the university is located?
- Are there predictors for increases or decreases in the rankings?

Steps we have done

- Find the data [Insert data sources]
- **Preprocess the data** – very messy data: missing values, different country names or uni names (impossible to merge), mix of datatypes (integer rank and rank interval)
- Data Exploration
- Machine Learning
